Location: Bengaluru, India

PROFESSIONAL SUMMARY

A skilled IVR and Conversational AI Tester with 3 years of hands-on experience in testing Genesys IVR applications and voice/chatbot platforms. Proficient in CYARA Velocity, Virtual Agent, and Cruncher for automated call flow validation. Demonstrates expertise in SSML optimization, Text-to-Speech augmentation, and NLU testing for enhancing conversational accuracy. Well-versed in Python scripting and API testing, along with log analysis using Splunk for backend validation. Delivers high-quality assurance across omnichannel platforms like Kore.ai, ensuring bot efficiency, seamless agent transfers, and overall performance reliability.

WORK EXPERIENCE:

Cognizant – Associate June 2022- Present

Key Responsibilities:

IVR & Voice BOT Testing

• Conducted end-to-end functional testing of Genesys IVR call flows, ensuring smooth routing, DTMF capture, error handling, and skill-based transfers.

• Designed and executed comprehensive test cases for IVR scenarios using CYARA Velocity and Virtual Agent, automating repetitive voice interaction tests.

• Validated speech-based interactions and fallback logic for Voice BOTs integrated with NLU engines (Dialogflow & Kore.ai).

• Applied CYARA Cruncher for load and stress testing of voice channels to ensure system stability under high call volume.

SSML & Text-to-Speech Augmentation

• Developed test plans for validating Text-to-Speech (TTS) outputs using SSML tags including pitch, emphasis, pauses, and audio enhancements.

• Ensured natural voice synthesis across languages and accents during regression cycles, improving user interaction quality.

Log Analysis & Monitoring

• Used Splunk to extract and analyze logs from IVR sessions and conversational interfaces for root cause analysis of call failures or incorrect bot responses.

• Created automated alerts and dashboards in Splunk for monitoring IVR/API integration issues in production.

Test Case Design & Automation

• Prepared functional and regression test cases covering both happy and edge cases for IVR and chatbot

flows.
• Created test data sets tailored to IVR routing rules, NLU models, and dynamic response behaviors.
• Integrated test workflows with CI/CD pipelines to ensure early defect detection in development cycles.

AI & Automation Integration

• Utilized GitHub Copilot and Microsoft Copilot for generating automation scripts, log parsing utilities, and SSML validation snippets.
• Conducted research on AI-enabled test tooling to improve the efficiency and accuracy of voice app testing processes.

Education

B.Tech/B.E. – Saveetha University, Chennai (2018 - 2022)

Tools & Technologies

• Platforms: Genesys Cloud, Kore.ai, Google Dialogflow, AWS
• Tools: CYARA Velocity, Virtual Agent, Cruncher, Splunk, Postman, Jenkins, Git
• Languages: Python, JavaScript, Java
• Testing Areas: IVR Testing, Voice BOT Testing, TTS/SSML Validation, API Testing, NLU

Certifications

1)Cyara
2)Kore.AI Basic V10
3)Kore.ai Advanced Developer V10
4)Google Cloud – Dialog Flow Essentials
5)Automation AI V11
6)AWS Certified Cloud Practitioner
